WEATHERSEALING: SMALL PRODUCTS, BIG IMPACT

When it comes to sealing out air and water in your door system, small pieces can pack the biggest punch. Without the right weathersealing components, your system is vulnerable to leaks, drafts and costly service calls. That's why every V-Series Door System is Powered By Endura™ Products' leading portfolio of weathersealing solutions that work together to seal out infiltration.

PE650 WEATHERSTRIP

Designed with durability and dependability in mind, the PE650 Weatherstrip absorbs 50% less water, offering maximum protection and a lasting seal.

SIMPLE SOLUTION™ CORNER PAD

The Simple Solution® Corner Pad is engineered to fit both beneath the weatherstrip and above the door sill cap, protecting the bottom corners of the door system from leaks and drafts by forming a tight seal against the door panel when the door is closed, and counteracting upward water pressure within the weatherstrip. Its innovative design seals after others fail - working even with wide strike margins.

Z-AC™ DOOR BOTTOM

Designed to work with the V-Series' auto-adjusting door sill Powered By Endura, the Z-AC Door Bottom features dual sealing fins and a central bulb that work together to form a weather-tight seal across the door cap, even when conditions aren't perfect.
