HOMEWRAP
Keeps Air and Water Out

Superior Performance Based on Unique Material Science.

DuPont Tyvek HomeWrap is the original house wrap, incorporating unique material science that helps keep air and water out, while letting water vapor escape.

It can also reduce home energy bills by controlling air flow and water intrusion, which helps insulation work better, allowing the HVAC system to work more efficiently. It's a house wrap engineered to keep homes cool in the summer, warm in the winter, and dry all year round.
